## THIS LOOKS GOOD

"MONEY SAVED IS MONEY EARNED".

Farmers' Save One Dollar a Day by Figuring Dairy Rations.

In New Hampshire county agents have been conducting a series of dairy feeding schools in six of the counties. In all twenty-six such schools have been held during the spring months. Seven more are planned. The interest and attendance in these schools are reported to have been very good. In carrying out these schools lecturing and formal talk have been practically eliminated and the dairymen are seated at tables and with pencil and paper figure out for themselves the composition of various rations and compute costs. Much enthusiasm has been aroused. That the results are worth while is indicated by the statement of one man at Hooksett, who reported a saving of one dollar per day, while another who attended the school at Warner wrote the county agent that he is now saving \$36 per month as a result of feeding a ration that he figured out while attending a feeding school. The discussion provoked by the farmers figuring these rations gives a better understanding of the value and cost of the various feeds available than any amount of lecturing could possibly accomplish.
